STAFFORD HILL WILDLIFE MANAGEMENT AREA

(Cheshire/Windsor)

- SIZE:** Four parcels of mostly sloping hillside totaling 1,481 acres. Slopes vary from gentle to steep, but there are some nearly flat hilltop areas, as well as a parcel of river bottomland. Elevation ranges from 950 to 1,930 feet.
U.S.G.S. Quad: Cheshire
- VEGETATION:** Much of the area is old pastureland, now planted with rows or small stands of fruit-bearing shrubs. There is agricultural activity on some portions of the area. A mixed northern hardwood and softwood forest covers the majority of the upland areas, but there are some steeply sloping fields.
- WATER:** The South Branch of the Hoosic River, stocked trout water, borders the western parcel. McDonald Brook and other small, cold-water streams are found in the southern portions of the area.
- WILDLIFE:** Stocked pheasant, cottontail rabbit, deer, waterfowl, woodcock, turkey, coyote and numerous nongame species.
- SPECIAL REGULATIONS:** Note that a "hunter orange" hat is required wear for hunters during the pheasant season.
